The automation between your emails, files and systems.

Collect email, and new files from folders, network shares, SharePoint, OneDrive or S3. Back up, read and prepare every one, then deliver the result to your document management, cloud storage, database or signing service, or to pretty much any other application. It all runs on your own system (a PC, a server or a cloud VM), with no cloud service in between.

Hands off to **Document systems** · **Cloud & databases** · **Webhooks & scripts** · **Email & chat** · **E-signature**

WHY MAIL ATTACHMENT DOWNLOADER 4.0

Your email and files, ready for your systems

Invoices, orders, contracts and reports arrive by email and in shared folders. Getting them backed up, read, named and into the right system is still a manual chore for most teams. Mail Attachment Downloader 4.0 does it automatically, on your own system.

Capture

Email from Gmail, Microsoft 365, Exchange, IMAP and POP3, plus new files from folders, network shares, SharePoint, OneDrive and S3. With PRO Rules Server, also database tables, Slack and Teams.

Prepare

Keep an encrypted copy of everything, read the values out of invoices and orders, and name and file every document exactly the way your systems expect.

Deliver

Hand the result to your document management system, cloud storage, database, signing service, chat, email, or your own API, script or program.

Built for the jobs teams repeat every day

- **Invoice intake:** read invoice numbers and totals and file each PDF in the right folder or system.
- **Order and PO processing:** turn orders in email into rows in a database or spreadsheet.
- **Mailbox backup and archive:** an encrypted, searchable copy you can export to PST, MBOX and more.
- **Scanned documents:** pick up files from a scanner's shared folder, name them and send them on.
- **Customer documents:** upload attachments to Laserfiche, M-Files, DocuWare or SharePoint.
- **Reports and alerts:** run summaries and notifications to Slack, Teams, email and more.

Private by design

- Runs on your own system: a PC, a server or a cloud VM. Email and files go straight between your servers and your computer, with no third-party cloud in between.
- Gmail and Microsoft 365 sign-in happens in your browser: the program never sees your password.
- Mail Attachment Downloader is CASA Tier-2 certified.
- AI is optional. The built-in AI runs on your own system, and the text of your emails and files is never sent to an AI.
- Secrets such as keys and tokens are stored encrypted on your computer.
- Trusted by users worldwide for over 10 years.

What customers say

> *We often call it 'Outlook rules on steroids'… an email-focussed Swiss knife in our pocket which we can confidently deploy in just a few hours.*
> **Jeremy**

> *With Mail Attachment Downloader, we have automated this process, saving hundreds of hours and improving efficiency, at a fraction of the cost of traditional solutions.*
> **Derek**

> *I love the program. It has been a huge time saver and I love that it will download specific email attachments to the NAS to be accessible by all employees…*
> **Stewart**

Used by customers at Siemens, Xerox, Stanford University, AT&T Mobility, Staples, Brother, Versace and CareerBuilder. All product and company names are trademarks or registered trademarks of their respective holders. Use of them does not imply any affiliation with or endorsement by them.

HOW IT WORKS

From a new email to a hand-off, automatically

Follow one invoice from arrival to hand-off. Each step is a PRO capability, so you can start with the part you need and add the rest later.

1 Collect

Free: email · PRO Rules Client: watches

- Pull in email, and new files from folders, network shares, SharePoint, OneDrive and S3.
- Run as often as every 15 minutes, or pick up new email as soon as it arrives.

New email	billing@acme.com
Attached	inv-97261.pdf

2 Back up

PRO Backup and up

- Keep an encrypted, searchable copy of every email or file, as long as you choose.
- Export to PST, MBOX, EML, MSG, PDF or ZIP, and restore or move mail between accounts.

Encrypted copy	kept 7 years
Export	PST · MBOX · EML

3 Read & extract

PRO Parser and up

- Highlight a value or describe it in words, and the parser finds it in every email.
- Line-item tables checked against the total, and e-invoices read exactly. Doubtful items wait for you to check.

INVOICE_NO	INV-97261
TOTAL	1,284.50
DUE	2026-12-14

4 Match & name

Naming: PRO Parser and up · Rules: PRO Rules Client

- A different rule for each sender, subject or file type, with its own folder, names and steps.
- Name files and folders from the sender, date, subject or a value read from the email.

Saved as

```
D:\Invoices\Acme\Acme_INV-97261_2026-11-14.pdf
```

5 Hand off

PRO Rules Client and up

- Upload to Laserfiche, M-Files, DocuWare or DocuSign, to OneDrive, SharePoint, S3 and more.
- Insert into a database, call a webhook, run a script, send a reply or post to Slack and Teams.

Document system	✓
Cloud storage	✓
Database row	✓
Slack alert	✓

The example above: an invoice from billing@acme.com arrives. It is backed up, its invoice number and total are read, the Acme invoice rule matches it, it is saved as `Acme_INV-97261_2026-11-14.pdf` in an Acme folder, and the document, its details and a Slack message go to your systems, with no one touching it.

CAPTURE & PROTECT

Collect from many sources, and keep everything

Sources: more than email

Source	Edition	Details
Email	All editions	Gmail and Google Workspace, Microsoft 365 and Outlook.com, Exchange (shared mailboxes too), IMAP and POP3. Walkthrough with provider tiles and guides for Yahoo, AOL, iCloud, Zoho, GoDaddy, IONOS, Fastmail, GMX, Proton Mail (through Proton Mail Bridge) and more.
Folders and network shares	PRO Rules Client and up	Watch a local folder or a network share, such as a scanner drop folder. Checked about every minute, and reacts to Windows change events.
SharePoint, OneDrive	PRO Rules Client and up	Process new files in a library or drive as they arrive.
Amazon S3 and S3-compatible	PRO Rules Client and up	Wasabi, Backblaze B2, Cloudflare R2, MinIO, DigitalOcean Spaces and Google Cloud Storage.
DocuSign	PRO Rules Client and up	Completed envelopes: the signed PDFs and the certificate go through your rules.
Database tables	PRO Rules Server	Each new or changed row becomes an item for your rules.
Slack and Teams	PRO Rules Server	Read messages and files from a channel as input.

Schedule and ingest

Free runs on a daily schedule. **PRO Backup and up** add every schedule choice (every 15 minutes, hourly or at a set time) and **download new email as it arrives**: IMAP accounts within seconds, Microsoft 365 about every minute. Run several accounts or sources in one run: up to 3 with PRO Backup, 5 with PRO Parser, and as many as you have with the Rules editions.

Backup & archive PRO Backup and up

- **Encrypted copy of every email** in an account's folders, kept from 30 days to forever, with an optional size limit, set per account.
- The first backup can be stopped and resumed. Later runs add only what is new, and mail deleted on the server stays as long as you say.
- **Restore points** go daily (02:00 by default; 7 daily and 4 weekly kept) to a folder, network share, Amazon S3 or Azure Blob, protected by a recovery key, so you can open them on another computer.
- **Search** the backup without connecting to the mail server.
- **Export** to EML, MBOX, MSG, PST, PDF (one per email, attachments alongside) or a ZIP of EML files. Whole backup, a date span or chosen folders. Re-exporting replaces files instead of duplicating them.
- **Restore** into the account's own mailbox, or **move mail to another kind of account**, such as Gmail into Microsoft 365, keeping read state, stars and labels.
- **Import** PST, MBOX and EML files into a backup, with duplicates skipped.
- **Extract data** to CSV: one row per email, or one row per email address.

History: nothing downloaded twice

Every account and watch remembers each item it has seen, so nothing is downloaded or processed twice, even after a restart or a renumbered folder. Failed steps retry on their own, finished steps never run again, every item shows what happened to it, and **Redo** reprocesses an item from its stored copy. Free keeps one day of details.

Restore, import and moving mail between account types are built and tested against test servers. Live-service tests on Microsoft 365, Exchange and Gmail are still to come.

READ, NAME & DECIDE

Turn email into clean, named, ready-to-use data

Parser PRO Parser and up

- Highlight a value in a sample email, or describe it in words, and the parser finds it in the next ones.
- Reads **line-item tables** and checks them against the total.
- Reads **e-invoices exactly**, with no AI: Factur-X, ZUGFeRD, XRechnung, Peppol and UBL.
- Unsure items wait in **Needs you**. The same invoice arriving twice is caught.
- Output to **CSV, Excel or Google Sheets**, with a Columns template of the fields you choose. With PRO Rules Server also to a database, a webhook or a *Tell me* alert.

Flexible naming & saving PRO Parser and up

Build the folder and file name from any part of the email, or from a value read out of it. Free saves in a fixed format.

Pattern	Result
`{FROM}\{SUBJECT}\{FILENAME}`	billing@acme.com\Invoice 97261\inv-97261.pdf
`{FILENAME}_{ID}{EXT}`	inv-97261_01H8X2.pdf
`{DATE[yyyy]}\{ORDER_ID}.pdf`	2026\SO-5521.pdf
`{MAILBOX_FOLDER}\{FILENAME}`	Invoices\inv-97261.pdf

Rules & Rule Editor PRO Rules Client and up

- A **different rule for each kind of email**: its own conditions, save folder, file names and follow-up steps.
- Match on sender, subject, dates, folders or file names, with AND / OR, regular expressions and a tester.
- **Chain rules**: one picks the emails, the next acts on the files it saved.
- Test all rules on real emails before they go live, keep drafts, and share filters and actions between rules.
- **Check rule order** finds rules that can never run because one above takes their files.
- **Email security conditions**: use SPF, DKIM and DMARC results or a look-alike domain check in a rule.
- **Expected emails**: be told when an email you expect does not arrive.
- Mark as read, move, copy or delete the email once it has been processed.

AI Assistant (beta) Also in Free

Describe what to download in your own words and the AI builds the rule. In Free it fills in your filters and marks what needs PRO. With PRO Rules Client or Server, test the rule on your emails, tick the results that are wrong and the AI fixes it, then save it or fine-tune it. Every change is a version you can go back to. Use **Edit using AI** on any saved rule.

AI engine	How it works
Built-in AI	Runs on your own system with limited rights after a one-time download of about 2.2 GB. Nothing you type or test is sent anywhere.
Your own server	Ollama or LM Studio.
Cloud AI	OpenAI, Anthropic Claude, Google Gemini or Microsoft Azure OpenAI, with your own account and key. It asks before a cloud service is first used. Email text and files are never sent.

AI agents (MCP): GitHub Copilot, Claude Code, Gemini CLI and other agents on your own system can ask what was downloaded and how your rules did. Read-only, off until you turn it on, reachable only from your computer. PRO editions

DELIVER & RUN

Send the result anywhere, and keep it running

Hand off to your systems

Destination	Edition	What you can do
Document management	PRO Rules Client and up	Laserfiche, M-Files, DocuWare
E-signature	PRO Rules Client and up	DocuSign: send saved files for signature
Cloud storage	PRO Rules Client and up	OneDrive, SharePoint (Online and on-premises), Amazon S3 and S3-compatible, Azure Blob, WebDAV, SFTP, FTPS, network share, Google Drive, Dropbox. Subfolders from fields such as the year; keep both, replace, skip or fail if a file exists.
Databases	PRO Rules Server	Insert, look up and store values over ODBC (64-bit drivers).
Webhooks, APIs, scripts	PRO Rules Server	Call any webhook or API, or start a Zap with Send to Zapier; run PowerShell or batch files or any program, and use values from the response in later steps. Handlebars templates.
Email	PRO Rules Server	Send templated replies, forwards and alerts as emails are processed.
Chat and notifications	PRO Backup and up	Run summaries (short or detailed; always, on files saved or problems, or only problems) and alerts to Slack, Microsoft Teams, Telegram, Discord, Google Chat, ntfy, Pushover, a webhook or email.

Work on the files PRO Rules Server

- **Convert** emails and attachments to PDF, multi-page TIFF, Word, images and more, across 50+ formats.
- **PDF tools:** combine an email and all its attachments into one PDF, split pages, add or remove passwords, and OCR scanned files into searchable PDFs.
- **Unzip** archives and act on the files inside.
- **Download linked files** from links in the email.
- **Copy, rename and print** as soon as files are saved.

Run it hands-off PRO Rules Server

- Runs as a **Windows service**, 24×7, with no one signed in, and starts again after a reboot. Also on Windows Server and in cloud VMs such as Azure.
- **Run AI prompts** with ChatGPT, Claude, Gemini or a model on your own system to summarize or categorize.
- **Extraction wizard** and AI field extraction for values inside a rule.
- **Error actions:** choose what happens when a step fails, for example move the email and alert your team.
- The service keeps its own History.

A smooth start: Version 4.0 installs beside version 3 and takes over its accounts, settings and license the first time it starts, without changing your 3.x settings. A current 3.x subscription covers 4.0 at no extra cost.

Hand-offs to Laserfiche, M-Files, DocuWare, DocuSign, SharePoint, S3, Slack and Teams are built and tested against test services. Live-service tests are still to come.

EDITIONS & PRICING

Choose the edition that fits the job

Each edition includes everything in the one before it. Subscriptions are billed yearly and include support and all major upgrades. One-time licenses for the Rules editions are also planned.
✦ AI marks what uses AI. AI is optional, and the built-in AI runs on your own system.

Free

$0

Personal use

- 1 account per run
- Save emails, attachments, or both
- AI Assistant (beta): describe what to download ✦ AI
- Daily schedule, 1 day of History
- Backup, Parser and PRO Rules shown as previews

PRO Backup

$49.99 / year

Back up and keep your mailboxes

- Commercial license
- Up to 3 accounts per run
- Every schedule, and new mail as it arrives
- Encrypted backup, export, restore, import
- Run summaries and notifications
- AI agents such as Copilot see what was downloaded, read-only ✦ AI

PRO Parser

$99.99 / year

Get values out of emails into spreadsheets

- Everything in PRO Backup
- Parser: CSV, Excel, Google Sheets
- Describe a value in words and AI finds it ✦ AI
- Your own file and folder names
- Up to 5 accounts per run

PRO Rules Client

$199.99 / year

Rules on a Windows desktop

- Everything in PRO Parser
- PRO Rules and Rule Editor
- AI builds, tests and changes rules from plain words ✦ AI
- Watches: folders, SharePoint, OneDrive, S3
- Upload to document systems and cloud
- Any number of accounts per run

PRO Rules Server

$299.99 / year

Hands-off automation, 24×7

- Everything in PRO Rules Client
- 24×7 Windows service, Windows Server
- Databases, scripts, webhooks, replies
- Convert, merge, split, OCR, unzip
- AI prompts as a step: summarize or sort ✦ AI
- Database, Slack, Teams watches

Which edition do I need?

If you want to…	Choose
I want to back up my mailboxes	PRO Backup
I want values from invoices and orders in a spreadsheet, and my own file names	PRO Parser
I want rules that save, convert, move and upload, and to watch folders and cloud files	PRO Rules Client
I want it running 24×7 on a server, with databases, scripts and replies	PRO Rules Server

Licensing

- Every PRO edition includes a commercial license. Free is for personal use.
- Several computers: one license with the number of computers you need.
- Volume pricing and a 25% reseller discount: sales@gearmage.com.
- 30-day money-back guarantee.

Upgrading from 3.x

- A current 3.x **subscription** covers 4.0 at no extra cost.
- A 3.x **one-time license** keeps working in 3.x. Version 4.0 needs the upgrade.
- Install 4.0 beside 3.x. It copies your accounts, settings and license once, and never changes your 3.x settings.

PRO Cloud. Want it running in the cloud? Tell us what you need and we will work out the right setup and pricing with you. Contact sales@gearmage.com.

SPECIFICATION SHEET

Platform, sources, backup and parser

General	Specification
Product	Mail Attachment Downloader 4.0, in Free and four PRO editions: PRO Backup, PRO Parser, PRO Rules Client, PRO Rules Server
Operating system	Windows 10 or later, 64-bit. PRO Rules Server also runs on Windows Server and in Windows cloud VMs such as Azure
Runtime	.NET Framework 4.8. The installer adds the Microsoft Visual C++ x64 runtime when it is missing
Install	Installs beside version 3 (own product and settings folder). One copy of the program runs at a time, and the Windows service is one version or the other
Settings	Copied once from 3.x on first start. 3.x settings are never changed
Databases	64-bit ODBC drivers and data sources (for Access, Excel, dBase or text files: the Microsoft 64-bit Access Database Engine)
Plugins	Plugins built for Any CPU or x64 are carried over. A 32-bit plugin must be rebuilt
Updates	Automatic update with a signature check

Sources and scheduling	Specification
Email protocols	Gmail (browser sign-in, no app password), Microsoft 365 and Exchange (Graph or EWS, shared mailboxes and groups), IMAP, POP3
File sources	Local folders, network shares, SharePoint, OneDrive, Amazon S3 and S3-compatible storage **PRO Rules Client and up**
Other sources	Database tables over ODBC, Slack, Microsoft Teams **PRO Rules Server**
Accounts per run	Free 1 · PRO Backup up to 3 · PRO Parser up to 5 · PRO Rules Client and Server: any number
Schedule	Free: none or daily · PRO: every 15 minutes, hourly or at a set time, plus new email as it arrives (IMAP within seconds, Microsoft 365 about every minute)
Watch checks	About every minute; folders also react to Windows change events

Backup and archive	Specification
Copies	Encrypted copy of each email in an account's folders. Identical copies are stored once
Retention	30 days to forever, with an optional size limit, set per account
Restore points	Daily (02:00 by default); 7 daily and 4 weekly kept; to a folder, network share, Amazon S3 or Azure Blob; recovery key required
Export formats	EML, MBOX (one per folder), MSG, PST, PDF (one per email, attachments alongside), ZIP of EML
Import formats	PST, MBOX (a file or a Thunderbird-style folder), EML folders
Restore	Into the account's own mailbox or another account (same or different kind); Gmail takes about 500 MB a day, so very large restores can take days
History	Per account and watch; Free keeps 1 day of details, PRO as you set. A short record that stops repeat downloads is always kept

Parser	Specification
Fields	Highlight in a sample or describe in words; line items checked against the total
E-invoices	Factur-X, ZUGFeRD, XRechnung, Peppol, UBL, read exactly (no AI)
Review	Doubtful items wait in Needs you; duplicate invoices are caught
Outputs	CSV, Excel, Google Sheets, saved email (folder and name), move email; database, webhook and Tell me with PRO Rules Server

Integrations and formats	Specification
Destinations	Laserfiche, M-Files, DocuWare, DocuSign, OneDrive, SharePoint, Amazon S3 and S3-compatible (Wasabi, Backblaze B2, Cloudflare R2, MinIO, DigitalOcean Spaces, Google Cloud Storage), Azure Blob, WebDAV, SFTP, FTPS, network shares, Google Drive, Dropbox, ODBC databases, webhooks, Zapier, scripts, email
Conversion	50+ formats: documents, spreadsheets, presentations, PDF and print, images, web and e-books. PDF merge, split, encrypt, decrypt and OCR
Notifications	Slack, Microsoft Teams (Workflows webhook), Telegram, Discord, Google Chat, ntfy, Pushover, webhook, email
AI engines	Built-in (about 2.2 GB one-time download), Ollama, LM Studio, OpenAI, Anthropic Claude, Google Gemini, Microsoft Azure OpenAI

Security and privacy	Specification
Where it runs	On your own PC, server or cloud VM. Email and files go directly between your servers and your computer
Sign-in	Gmail and Microsoft 365 sign in through your browser; the program never sees your password
Secrets	Keys, tokens and passwords are stored encrypted on your computer
AI privacy	Nothing is sent to a cloud AI until you choose it and agree. Email text and files are never sent to an AI
AI agents	Read-only, off until turned on, reachable only from your computer, protected by a token
Certification	CASA Tier-2 certified
Support and license	Subscriptions include support and all major upgrades. Every PRO edition includes a commercial license. 30-day money-back guarantee
